DRY CHEMICAL SYSTEM

ALTORA dry chemical system unit is custom designed for your particular fire fighting vehicle and applicable for every type of ALTORA fire fighting vehicles. Agent capacities range from 50-1000 kg as requested and it is designed to NFPA standards based on the specific hazard. Systems can be operated by one or two person operation for swift first response situations.

FIRE FIGHTER CHOICE

Single stage centrifugal pump is directly coupled with a suitable engine and mounted on a trailer for surface transportation. The Pump is equipped with exhaust priming system as standard for fast & effective priming from deep lift. However Firefly's reciprocating priming system "Primatic" which is completely automatic in operation can also supplied with these pumps as optional. The engine is air cooled as well as water cooled for better performance. The complete set up is equipped with radiator, heat exchanger, battery, electric starter, 40 liters diesel tank, control panel etc. This unit can be used to combat fire for longer times. Pump capacities can be made available up to 4000 LPM pumps with higher capacity engines.

Why 'FireHawk PTO Only'?

- > Oil Lubricated oversized bearings make the PTO strong
- > Silent in operation
- > Excellent interchangeability of all components
- > Perfectly designed mounting pads reduce vibration levels
- > Front & Rear bearing/bearing caps can be removed without removing the PTO from the vehicle
- > Flanges to suit any vehicle are available
- > Excellent workmanship
- > Excellent & prompt service / spares back up
